ABSTRACT OF THE DISCLOSURE

a<sup>2</sup>

A mobile deliveries data acquisition device including a reader (2) for reading machine-readable data concerning objects to be delivered and an input system whereby recipient-identifying data may be input. The device further includes an accessory module for the delivery process of a mobile data acquisition device. The device improves upon known mobile data acquisition devices and/or accessory modules for such a device by minimizing the complexity of data processing and by automating recipient identification by including, as an input system, a reader (3) for machine-readable recipient identifications.
